(54) Title: VERIFICATION KEY FOR REPLACEMENT PARTS

(57) Abstract: The present application relates to methods and apparatus for verifying the authenticity of, or ensuring, the correct substitution of, replacement units (7) which connect to a master device (8) in order to facilitate the operation of that device. A verification means to determine the authenticity and/or the correct connection of the replacement unit is provided in the form of a remotely detectable tag (1), such as an optical or magnetic tag, which is provided in or on the replaceable unit. A detection system is then provided in the master unit which provides a means to excite the tag when the replaceable unit when brought into proximity with the master unit, and which also provides a means to detect the response of the tag to the excitation means.
